

Boost your cleaning power

Ideal for stubborn stains on carpet, upholstery, and hard surfaces

Matrix **Oxidizer** Cleaning Booster

Oxidizer is one of the most effective but least understood additives in the cleaning industry. Not to be confused with optical brighteners which void carpet warranties, an oxidizer is essentially a safe form of bleach. It's ideal for use on stubborn stains or browning on carpet, upholstery, and hard surfaces.

Matrix Oxidizer is specially formulated to boost the performance of your traffic lane cleaner or extraction detergent. It is effective against the smallest microns of soil particles that normal detergents cannot break free. Matrix Oxidizer also works well on minor nicotine stains and can be used on tile and grout for whitening characteristics.

Matrix Oxidizer is a powdered version of hydrogen peroxide. Once it releases an atom of oxygen and breaks down, it self-neutralizes.

Because of its aggressive pH, Matrix Oxidizer should not be used on wool. Always pre-test in an inconspicuous area for dye stability and fabric compatibility before using.

Note: Always leave extra space when putting Oxidizer in a closed container. As Oxidizer breaks down, oxygen is released and can build up in a container. Always leave extra space and release the pressure after spraying. Use Oxidizer mixture within 30 minutes.

MATRIX™

Dilution

Dilution Ratios:

CARPET:

- For hot water extraction, mix 1/2 to 1 ounce of Oxidizer per gallon of warm ready-to-use cleaning solution.
- For rotary carpet cleaning, mix 1/2 to 1 ounce of Oxidizer and 3 ounces of Prochem Fine Fabric Shampoo per gallon of warm water.

UPHOLSTERY:

- Mix 1/2 to 1 ounce of Oxidizer per 1 gallon of warm, ready-to-use cleaning solution for extraction, shampoo, or foam cleaning.

BROWNING REMOVAL:

- Mix 1 ounce of Oxidizer, 1 ounce Prochem Fiber Buff, and 2 ounces of Prochem Fine Fabric Shampoo per gallon of warm water.
- For carpet, spray on browned area; allow 5 minutes dwell time and extract.
- For upholstery, whip mixture into foam, apply to browned area, allow up to 5 minutes dwell time, and vacuum. Repeat if needed. Use fan to accelerate drying.
