

Eliminates the risk of **over-scrubbing** and **over-wetting** upholstery

Outset. Dissolves the toughest upholstery soils.

People spend a lot of time lounging on the couch or in their favorite recliner, yet they hardly think of getting these pieces of furniture cleaned. When customers finally call you for a professional cleaning, you're faced with fabrics that contain a heavy and stubborn buildup of hair and body oils, food, beverages, pet hair, pet odors, and even cigarette smoke.

To solve this cleaner's nightmare, the chemists at Matrix developed Outset Upholstery Pre-Spray, a powerful, non-ammoniated product that dissolves tough upholstery soils for fast and easy rinsing.

Outset has a non-foaming formulation that gives optimum cleaning results and never leaves behind a sticky residue. Thanks to its potent cleaning properties that slice through the oily binders on upholstery soil like a hot knife through butter, Outset virtually eliminates the risk of over-scrubbing and over wetting.

Outset is non-toxic, user-safe, and safe for use on white or wool upholstery.

MATRIX™

Dilutions and Usage Instructions

pH: 10.0-12.0 Safe for use on white or wool upholstery.

Dilutions:

This product requires no dilution; it's ready to use for your convenience.

Usage Instructions:

Upholstery cleaning is a more delicate cleaning procedure than general carpet cleaning. Upholstery cleaning chemicals are formulated to be hypoallergenic due to increased contact with skin. Products used on upholstery must always be tested. Do this by diluting the chemical at the dilution you would use to clean the entire fabric. Look for bleeding, crocking, and color transfer while testing. Check the threading and piping for any abnormalities or different colors. Open up the cushions at the zipper and look for any magic marker used to mark cushions. Common symbols on tags for upholstery are X - vacuum only, S - solvent only, W - wet clean and S/W - solvent or wet clean.

- 1. Vacuum well. Be sure to use a crevice tool in the corners and crevices. Never stick your hands inside the cushion, as there is no telling what could be inside.**
- 2. Using a pump-up sprayer, apply Outset Upholstery Pre-Spray.**
- 3. Use a horsehair brush to agitate heavily soiled areas.**
- 4. Allow 10 minutes of dwell time for soil suspension.**
- 5. Using an extraction machine, extract furniture with Matrix Impression Upholstery Cleaning Concentrate.**
- 6. Dry vacuum all excess moisture, especially around the arms and cushions.**
- 7. Speed dry with air movers.**

Right: Matrix Impression Upholstery Cleaning Concentrate. The perfect compliment to Matrix Outset Upholstery Pre-spray for delivering a deep, quality clean.
