Each container has a six-digit number that is the product batch code. The first digit designates the year, the second digit is a letter designating the manufacturing facility. The next four digits are assigned sequentially over the year. For example, batch # 8C-0003 was manufactured in early January of 2018.

Near the batch code is also printed the date of manufacture. Often customers are concerned that the date is an expiration date and the product is expired. Since this is the date the product was manufactured, it will always be in the past.
