Testing: Apply Microban Disinfectant Spray Plus on a section of fabric in an inconspicuous area to test for colorfastness or adverse reaction. This product may be harmful if swallowed (inhaled or absorbed through the skin). Do not breathe vapors (dust or spray mist). Do not get in eyes, on skin, or on clothing. Microban Disinfectant Spray Plus should not stain materials not stained by water. Surfaces that are treated are safe to touch. Do not wipe the sprayed surface. Microban Disinfectant Spray Plus should not stain those materials not stained by water.

For air duct usage:

• Do not use in attics, garages or other non-ventilated areas.
• For in unventilated areas, use a ventilation system with an airflow of approximately 50 CFM per square foot of duct cross section. If this is not possible, OSHA confined space regulations must be followed and the requirements for a permit required space apply. These requirements include testing the atmosphere and use of chemical resistant coveralls, chemical resistant gloves, and chemical resistant goggles. In addition, the ductwork must be ventilated with fresh air the duct system must be maintained under slight positive pressure.

SPECIAL INSTRUCTIONS FOR APPLICATORS:

• Use only as directed.
• Avoid higher pressure differentials that would be likely to disrupt the coverage pattern.
• For ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated. During ULV, mist or spray application, the duct system interior must be maintained under slight positive pressure. The positive pressure differential shall be a minimum of 1/2" of water column, and shall be maintained until all chemicals are treated.

Refer to the pesticide label for any specific additions to the above storage and disposal procedures.

Storage: Keep from freezing. Store in shaded, dry area. Keep from exposure to light and strong sunlight. Dispose of container in a landfill approved by state or local authorities.

Disposal: Pesticide Disposal: Models resulting from the use of this product may be disposed of in soil or on an approved waste disposal facility.

Carlton Disposal: Large containers (tanks, drums and their packages) or 55-gallon disposable or equivalent containers or any container exceeding 50 gallons or 1000 pounds (drums or their packages) are subject to hazardous waste identification and disposal requirements of U.S. Environmental Protection Agency (USEPA) regulations and/or local authority. See USEPA regulations and/or local authority for disposal requirements.
